

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE COMPLETE
MATHEMATICAL AND GENERAL
NAVIGATION TABLES,

INCLUDING EVERY TABLE REQUIRED WITH THE NAUTICAL ALMANAC IN FINDING THE

LATITUDE AND LONGITUDE :

WITH AN EXPLANATION OF THEIR CONSTRUCTION, USE, AND APPLICATION TO

NAVIGATION AND NAUTICAL ASTRONOMY,
TRIGONOMETRY, DIALLING, GUNNERY, ETC. ETC.

BY THOMAS KERIGAN, R.N.

AUTHOR OF "THE YOUNG NAVIGATOR'S GUIDE," ETC.

SECOND EDITION;

CAREFULLY REVISED, AND ADAPTED TO THE IMPROVED ELEMENTS INTRODUCED INTO THE
NAUTICAL ALMANAC.

Dedicated, by permission, to the Right Hon. the Lords Commissioners of the Admiralty.

IN TWO VOLUMES.

VOLUME II.

LONDON :

PUBLISHED BY SIMPKIN, MARSHALL, & CO.,
STATIONERS' HALL-COURT, LUDGATE-HILL;

AND SOLD BY J. W. NORIE AND CO., LEADENHALL-STREET.

MDCCCXXXVIII.

LONDON: PRINTED BY MILLS AND SON,
GOUGH-SQUARE, FLEET-STREET.

CONTENTS OF VOL. II.

<i>Table.</i>		<i>Page.</i>
I.	To convert longitude or degrees into time, and conversely	2
II.	Depression of the horizon	3
III.	Dip of the horizon at different distances from the observer	3
IV.	Augmentation of the moon's semidiameter	3
V.	Contraction of the semidiameters of the sun and moon	3
VI.	Parallax of the planets in altitude	3
VII.	Parallax of the sun in altitude	4
VIII.	Mean astronomical refraction	4
IX.	Correction of the mean astronomical refraction	5
X.	To find the latitude by the north polar star	6
XI.	Correction of the latitude deduced from the preceding table	7
XII.	Mean sun's right ascension	7
XIII.	Equations to equal altitudes of the sun, part First	8
XIV.	Equations to equal altitudes of the sun, part Second	9
XV.	To reduce the sun's longitude, right ascension, and declination; and, also the equation of time, as given in the Nautical Almanac, to any given time under a known meridian	10
XVI.	To reduce the moon's longitude, latitude, semidiameter, and horizontal parallax, as given in the Nautical Almanac, to any given time under a known meridian	13
XVII.	Equation of the second difference of the moon's place	16
XVIII.	Correction of the moon's apparent altitude	17
XIX.	To reduce the true altitudes of the sun, moon, stars, and planets, to their apparent altitudes	26
XX.	Auxiliary angles	28
XXI.	Correction of the auxiliary angle when the moon's distance from a planet is observed ..	37
XXII.	Error arising from a deviation of one minute in the parallelism of the surfaces of the central mirror of the circular instrument of reflection	37
XXIII.	Error arising from an inclination of the line of collimation to the plane of the sextant, or to that of the circular instrument of reflection	37
XXIV.	Logarithmic difference	38
XXV.	Correction of the logarithmic difference for the sun's, or star's apparent altitude	47
XXVI.	Correction of the logarithmic difference for a planet's apparent altitude	47
XXVII.	Natural versed sines, and natural sines	48
XXVIII.	Logarithms of numbers	138
XXIX.	Proportional logarithms	167
XXX.	Logarithmic half elapsed time	182
XXXI.	Logarithmic middle time	188
XXXII.	Logarithmic rising	194
XXXIII.	To reduce points of the compass to degrees, and conversely	203
XXXIV.	Logarithmic sines, tangents and secants, to every point and quarter point of the compass	203
XXXV.	Logarithmic secants to every second in the semi-circle	204
XXXVI.	Logarithmic sines to every second in the semi-circle	312
XXXVII.	Logarithmic tangents to every second in the semi-circle	420
XXXVIII.	To reduce the time of the moon's passage over the meridian of Greenwich to the time of her passage over any other meridian	546
XXXIX.	Correction to be applied to the time of the moon's reduced transit in finding the time of high water at any given place	546
XL.	Reduction of the moon's horizontal parallax on account of the spheroidal figure of the earth	546
XLI.	Reduction of terrestrial latitude on account of the spheroidal figure of the earth	546

<i>Table.</i>	<i>Page.</i>
XLII. A general traverse table, or difference of latitude and departure	547
XLIII. Meridional parts	585
XLIV. The mean right ascensions, and declinations of the principal fixed stars	592
XLV. Acceleration of the fixed stars, or to reduce sidereal time into mean solar time	597
XLVI. To reduce mean solar time into sidereal time	597
XLVII. Time from noon when the sun's centre is in the prime vertical; being the instant at which the altitude of that object should be observed, in order to ascertain the apparent time with the greatest accuracy	598
XLVIII. Altitude of a celestial object (when its centre is in the prime vertical), most proper for determining the apparent time with the greatest accuracy	599
XLIX. Amplitudes of a celestial object reckoned from the true east or west point of the horizon	600
L. To find the times of the rising and setting of a celestial object	602
LI. For computing the meridional altitude of a celestial object, the latitude and the declination being of the same name	604
LII. For computing the meridional altitude of a celestial object, the latitude and the declination being of contrary names	606
LIII. The miles and parts of a mile in a degree of longitude at every degree of latitude	608
LIV. Proportional miles for constructing Mercator's charts	608
LV. To find the distance of terrestrial objects at sea	608
LVI. To reduce the French centesimal division of the circle into the English sexagesimal division; or, to reduce French degrees into English degrees, and conversely	609
LVII. A general table for gauging, or finding the content of all circular-headed casks	610
A Equation of second differences for correcting the approximate time at Greenwich....	610*
B To reduce the geographical to the geocentrical latitude	611*
C Logarithmical radius of the earth	611*
LVIII. Latitudes and longitudes of the principal sea-ports, islands, capes, shoals, &c., in the known world; with the time of high water, at the full and change of the moon, at all places where it is known	611
Alphabetical reference to the preceding table	642
Form of a transit table	644
Miscellaneous numbers with their corresponding logarithms	645
A table showing the true time and degree at which the hour and minute hands of a well-regulated watch, or clock, should exactly meet, or be in conjunction &c., in every revolution	645
Capt. W. F. W. Owen's table of latitudes and longitudes	646

APPENDIX.

To find the ratio which the circumference of a circle bears to its diameter	662
To deduce the natural sines from the ratio of the circle	665
To deduce the natural sines from the circle by projection	665
To find the value of the arc that is equal to the radius	667
To find the length of the arc of one-degree	668
To find the area of a circle whose diameter is unity, or 1	668
To find the area of a circle whose circumference is unity, or 1	668
To find the solidity of a sphere whose diameter is unity, or 1	669
To find the side of a square that is equal in area to a circle whose diameter is unity, or 1	669
To find the side of a square inscribed in a circle whose radius, or semidiameter is unity, or 1	669
To find the radius that will circumscribe a square that is equal in area to a circle whose radius is unity, or 1	670
To perform the operation called <i>tetragonism</i>	670
To reduce a given circle to a geometrical square	670

DIRECTIONS

FOR TAKING OUT THE NATURAL VERSED SINE SUPPLEMENT, THE NATURAL CO-VERSED SINE, OR THE NATURAL CO-SINE OF ANY GIVEN ARCH.

If the size of the page admitted of another column being annexed to each compartment, so as to extend every degree to 60 seconds at the top of the page; that is, to every tenth second from $0''$ to $60''$, then, the taking out of the supplemental, or complemental values of arcs and angles would be equally as apparent as the taking out of the values of the direct arcs; because, in this case, the supplemental, or indirect arcs would begin at $0''$, at the bottom of each page: but since this could not be done, and since the supplemental, or complemental value of an arch, expressed in integral or *whole* degrees, is necessarily represented by the value of the next *less* degree at bottom in the column marked $60''$, it being the last, or rather the *uppermost* number at the top of that column; the Reader is, therefore, requested to attend to the following

RULES.

1.—If the given supplemental, or complemental arch be expressed in *whole* degrees, its value will be found in the same page with the next *less* degree in the column marked $60''$ at bottom, or $0''$ at top; it being the last number in that column, reckoning from the bottom upwards; or the first, reckoning from the top downwards.

2.—If the arch be expressed in degrees, and seconds *less* than 10; the value of the integral or *whole* degrees is to be found as above; from which let the proportional part corresponding to the given seconds, at the bottom of the page, be deducted, and the remainder will be the true value of such arch.

3.—If the arch be expressed in degrees and *whole* minutes, its value will be found on the same line with the next *less* minute in the column marked $60''$ at bottom, or $0''$ at top of the page.

4.—If the arch be expressed in degrees and minutes, and seconds *under* 10, the value of the degrees and *whole* minutes is to be found in the manner just mentioned; from which let the proportional part corresponding to the odd seconds, at the bottom of the page, be subtracted, and the remainder will be the correct value of the given arch.

5.—If the arch be expressed in degrees, minutes, and tens of seconds, its value will be seen directly; but if the seconds are not *even* tens, which in general will be the case, find the value

of the given degree, minute, and next *less* tenth second; from which let the proportional part corresponding to the odd seconds, at the bottom of the page, be subtracted, and the result will be the true value of such arch.

6.—If the arch be expressed in minutes and seconds, its value is to be found in the same manner as directed in the second member of the last Rule, substituting, however, the word *O degree* for “given degree.”

In like manner may the value of the log. co-secant, the log. co-sine, and the log. co-tangent, of any given arch be very readily taken out; observing to read fifths of seconds for tenths of seconds; except in the last 10 pages of the log. co-secants, and in the first 10 pages of the log. co-sines. And, generally, the same rules are to be observed in taking out the values of all arcs or angles that may be found at the bottom of the Tables of Natural Versed Sines, Logarithmic Sines, Secants, and Tangents.

See Note, page 57; Rules, pages 58—60:—Note, page 90; Rules, pages 91—92:—and Note, page 94; Rules, pages 94—95, of the first volume.

The converse of the above Rules, that is, the finding of the arch corresponding to a given versed sine, &c. &c. is obvious, and therefore need not be insisted upon in this place, particularly since it has been already given in pages 60, 92, and 95, of Volume I.

TO MARINERS IN GENERAL.

The author conceives it to be a duty incumbent upon him to acquaint the Mariner, that in collating the Table of Latitudes and Longitudes contained in this volume with the surveys that have been taken by the navigators of different countries, such remarkable discrepancies have been discovered in the geographical positions of the *same places*, as established by different authorities, as to prove beyond all doubt that one, at least, of those positions must be erroneous:—and since there is no rule for showing why a preference should be given to any particular authority, or of deciding which of the authorities is the most deserving of credit on points where each seemed to have been possessed of the fairest pretensions to a competent knowledge of hydrographical subjects; the mariner is requested not to approach the places thus alluded to but with the greatest caution; so that he may have a fair chance of avoiding the consequences which might result from placing an unqualified confidence in any of those positions.

The following list contains the names of the places in which the most considerable geographical differences have been discovered. In this list, the positions which immediately follow the names of the places, are those that have been made choice of in Table LVIII; the other positions, or those which are ranged in a line with the preceding, are the Latitudes and Longitudes that are usually met with in the common books on navigation.

Names of Places.	Coast or Country.	Latitude.	Longitude.	Latitude.	Longitude.
Sheerness Fort	England	51. 11. 25 N	0. 44. 26 E	51. 26. 45 N	0. 44. 26 E

Cape Bonavista	Newfoundland	48. 42. 5	52. 56. 0	48. 56. 0	52. 34. 0
Bear Island	James' Bay	54. 34. 0	81. 24. 0	54. 34. 0	79. 56. 0
Cape Farewell	Greenland	59. 45. 0	47. 50. 0	59. 42. 0	45. 16. 0
Cape Newnham	N. W. Ct. America	58. 34. 0	161. 55. 0	58. 41. 30	162. 19. 30
Cape Douglas	N. W. Ct. America	58. 52. 0	152. 50. 0	58. 56. 0	153. 50. 0
Leon	Mexico	12. 21. 0	86. 45. 0	11. 50. 30	87. 9. 0
St. Blas, Port	Mexico	21. 32. 48	105. 15. 33	21. 30. 0	104. 46. 0
Desceada Isle	West Indies	16. 20. 0 N	61. 50. 0 W	16. 20. 0 N	61. 6. 30 W
Pantellaria Isle	Mediterranean	36. 51. 15 N	11. 3. 40 E	36. 51. 15 N	11. 54. 29 E

Now, when the mariner takes into consideration the extent of some of these discrepancies, and how very materially their removal will conduce to the common interests of hydrography and

navigation, he will doubtlessly be induced, in the event of touching at any of the places enumerated in the foregoing list, to avail himself of every favourable opportunity that may occur for taking the necessary observations, so as to establish the correct geographical positions of those places.—And when it is remembered that the latitude of Sheerness (a place so much frequented by naval officers) has not as yet been satisfactorily determined,—that a place so adjacent to the coast of England as St. Quintin has an error of 115 miles in its longitude, as laid down by different surveyors,—that La Conchée is placed upon opposite sides of the same meridian, and that the same islands are placed upon opposite sides of the equator; there will then be strong presumptive grounds for doubting the truth of many other positions: the consideration of which ought to act as a warning voice to seamen against placing anything like implicit faith in the old or original charts and surveys of any maritime country whatever.

Remark.—To the original list of geographical discrepancies I have now to add the island of Panetllaria. This is a small island in the Mediterranean Sea, adjacent to the coast of Lybia in Africa; it being only about 53 miles to the eastward of Tunis. When Robert Ingram, Esq., was in command of His Majesty's ship *Ætna*, in the year 1830, he found the position of Pantellaria to be considerably to the eastward of that which is assigned to it in all our nautical tables; and thus, he is of opinion that the correct longitude of the *Fort* is $11^{\circ} 54' 29''$ East; instead of $11^{\circ} 3' 40''$, as stated in page 620 of this volume. This shows that *one of the longitudes* must be *erroneous* to the value of $50' 49''$ or 51 miles in round numbers; which is rather *alarming*, seeing that the whole island does not measure more than about 17 or 18 miles in circumference. However, as the island in question is only 177 miles distant from Malta, in the direction of North $70^{\circ} 49'$ West; it is to be hoped that some of our ships of war will afford the *Master*, or some other competent person, an opportunity of verifying the result of Captain Ingram's observation.

THE TABLES.

Right Ascension of the Meridian in Sidereal Time.		Correction of Polar Star's Alt.	Annual Variation of Correction.	Proportional parts of Correction for the intermediate Mins. of Sidereal Time.					Right Ascension of the Meridian in Sidereal Time.	
				1 ^m	2 ^m	3 ^m	4 ^m	5 ^m		

When the Right Ascension of the Meridian falls in either of these two columns, the Correction will be Subtractive.

When the Right Ascension of the Meridian falls in either of these two columns, the Correction will be Additive.

TABLE XI.—Correction of the Latitude deduced from the preceding Table. 7

Right Asc. of Meridian or Sidereal Time.	Approximate Latitude.																Right Asc. of Meridian or Sidereal Time.	
	0°	10°	20°	30°	35°	40°	45°	50°	55°	60°	65°	70°	75°	80°	85°

1'	2'	3'	4'	5'	6'	7'	8'	9'	10'	11'	12'		Longitude of the Ship or place.
Variation in 24 hours.													

In correcting the Sun's Declination at Noon, the reduction, corresponding to the given longitude, is to be applied agreeably to the instructions contained in the Note at the bottom of the preceding page.

TO REDUCE THE SUN'S LONGITUDE, RIGHT ASCENSION, AND DECLINATION, AND, ALSO, THE EQUATION OF TIME, AS GIVEN IN THE NAUTICAL ALMANAC, TO ANY GIVEN MERIDIAN, AND TO ANY GIVEN TIME UNDER THAT MERIDIAN.

Appar. time past Noon.		Variation in 24 hours.												Longitude of the Ship or place.

Appar. time past Noon.		Variation in 24 hours.												Longitude of the Ship or place.		
		13'	14'	15'	16'	17'	18'	19'	20'	21'	22'	23'	24'			

The proportion corresponding to the intermediate numbers of longitude best to be used in the reduction corresponding to the numerical designations 1, 2, 3, &c. to be taken (as directed) in the lower horizontal column at top, marked 1 to 157.

Found by taking out the reduction corresponding to the numerical designations 1, 2, 3, &c. to be taken (as directed) in the lower horizontal column at top, marked 1 to 157.

TO REDUCE THE MOON'S LONGITUDE, LATITUDE, RIGHT ASCENSION, DECLINATION, SEMIDIAMETER
AND HORIZONTAL PARALLAX, AS GIVEN IN THE NAUTICAL ALMANAC, TO ANY GIVEN
MERIDIAN, AND TO ANY GIVEN TIME UNDER THAT MERIDIAN.

Time from Midnight.		Variation in 12 hours.															Longitude of the Ship or place.
